## Work Experience

### Lightcast — Full-Stack Software Engineer II

MOSCOW, ID | MAY 2022 – PRESENT

- Develop and maintain full-stack features for data visualization web app using PHP and JavaScript/React to provide insights needed to build and develop educational institutions, companies, and communities.
- Collaborate with cross-functional team members to design new features and to incorporate new data streams into existing tools.
- Communicate with Product Managers to identify minimum viable product requirements and clearly defined feature sets.
- Scope out solutions to technical problems and proactively mitigate risks to ensure successful project outcomes.
- Create application interfaces to consume data from APIs and relational SQL database.
- Conduct regular code reviews and offer constructive feedback to maintain best-practice standards throughout the codebase.
- Engage in Agile development processes, including sprint planning, daily stand-ups, and retrospectives.
